Sprint 1 Plan

Product Name: Workout Logger (WIP)
Team Name: ??? (WIP)
Sprint Completion Date: 7/5/24

Goal

At the end of this sprint, we should be able to have our first screen deployed and mostly functional; that is, to be able to view part of a weekly calendar detailing a barebones workout plan. We should also have our product/team names figured out, along with a plan of what each of our scrum responsibilities will look like throughout the class.

Task Lists

1. As someone maintaining/developing the habit of going to the gym, I want to plan my weekly workouts with a calendar so that I can ensure I'm reaching my fitness goals.
   a. Create weekly calendar home screen
   b. Make each day editable with a short goal for the day (ie. back, chest/triceps, rest)
   c. Scrollable interface for readability
   d. Potentially have the current day of the week listed at the top
   e. Goal data is stored locally on device
Team Roles

Ali - Product Owner
Calvin - Scrum Master
All - Developer

Burnup Chart

Burnup Chart

A goal of 20% completion for the first sprint is most realistic given that we've had two group members leave and have had massive scheduling struggles to begin the development process. Once these issues are resolved, sprints 2 and 3 will be much more focused on core functionality.
