Sprint 2 Report

Train Easy - Routeam

- Stop doing:
  - Implementing new libraries without group communication
    - Not a huge deal since expo will say what libraries need to be installed, but some sort of central space for libraries/putting library names in discord should be a priority
- Start doing:
  - More regular conversations about visuals
    - Next sprint will need to emphasize polish, we need to be on the same page about the final look of our product
  - Keeping individual components in components folder
    - This will keep code clean and organized, and will help isolate bugs
- Keep doing:
  - Creating new branches from dev
    - We've implemented this policy well and it's led to better organization
  - Code reviews
    - This has helped keep everything organized and documented
  - Discord communication
    - This has enabled quick communication about pull requests, bug fixes, and other general questions
- Work completion (User story # marked in parenthesis):
  - Completed:
    - Weights and cardio tabs (2)
    - User inputted workouts (1)
    - PR indicator (2)
    - Each day stores the workouts done then (3)
  - Not completed:
    - Graphic for PR (2)
    - Workout organization (1)
- Work Completion Rate:
  - Total user stories completed: 3
  - Total number of estimated hours: 50
  - Amount of days: 6
  - User stories/day: ½
  - Work hours/day: ~2.1
